## At the time of visit :

- ① Please come to the laboratory behind our clinic at the reserved time and press the bell in the laboratory.
- ② Please show your Photo ID. The receptionist will make a copy of your Photo ID and measure your body temperature.
- ③ Please read the notes and fill in the necessary information on the questionnaire.
- ④ The test result will be explained by the doctor on the day.
- ⑤ If you need the certification, please let us know at the time of booking

\* A test result certificate will be issued on the same day (as a general rule, it will be given 30 minutes to 1 hour after the sample is collected).

【We may consult with you regarding the date and time of issuing the test result certificate for groups.】

### Specimen collection method (nasopharyngeal swab)

1. Bend your head back slightly so that the nasal passage become more accessible.
2. We insert swab into one nostril.
3. We rotate swab over surface of posterior nasopharynx for several seconds.
4. We withdraw swab from collection site.
5. We repeat procedure for the second nostril.

### Result and Certificate

If negative, you will be able to receive a negative certificate at our clinic on the same day (as a general rule, it will be given 30 minutes to 1 hour after the sample is collected).

• In case you tested positive, we will notify you promptly. You have to stay where you follow the orders from the public health center in your jurisdiction. In addition, we are not able to issue a negative certificate and the test fees are not refundable. Thank you for your understanding.

Inspection instrument: Fuji Dry Chem IMMUNO AG1 (Novel coronavirus antigen testing system ; manufactured by Fujifilm, Japan) :

富士ドライケム IMMUNO AG1

■Drop the sample extract into the novel coronavirus antigen test kit “COVID-19 Ag” . When set in the infectious disease test device “Fuji Dry Chem IMMUNO AG1” , the measurement will start automatically and the judgement result will be obtained in 15 minutes. “COVID-19” was detected by Fujifilm original “Silver amplification immunochromatography method” , amplification of the label approximately 100-fold allows for detection of lower viral loads.

This inspection instrument is officially approved as a medical device by the Ministry of Health, Labor and Welfare.
